Keeping up with the Times . . .

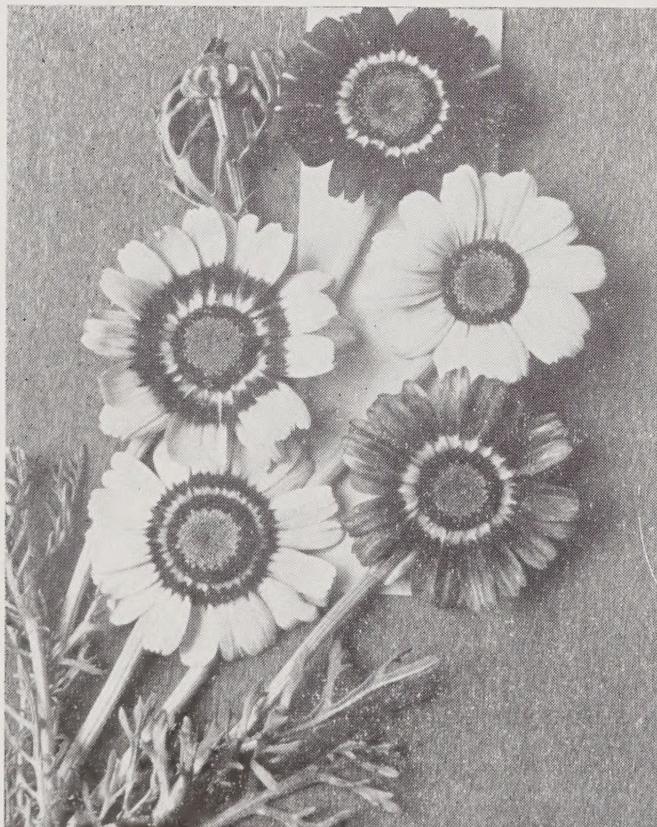

We can honestly say that during over 25 years of contact with gardeners we cannot remember a season when we have found such general satisfaction with their crops, both vegetables and flowers, as our customers have experienced this past year.

The very favorable weather was in the main responsible for this success but we do know that the fact of much of our seed having been treated with preventives against soil carried fungus diseases was a valuable contribution. Plant diseases are on the increase and in spite of the favorable season diseased crops were being reported from time to time.

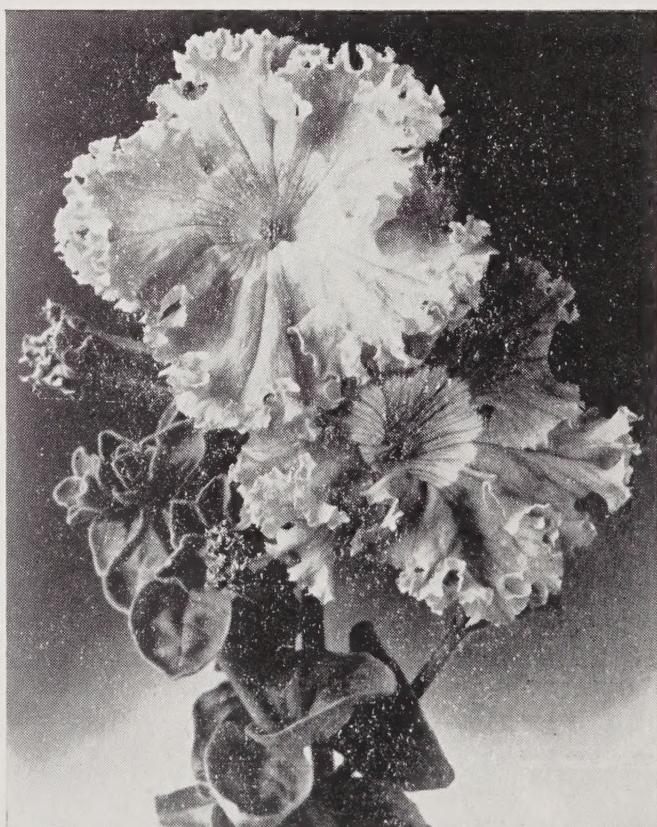

As one of our customers said "Carry on with the good work" — which is exactly what we intend to do.

Cordially,

Now that DDT has eliminated the attacks of thrip on Gladiolus, the most serious malady now affecting them is the fusarium rot which sometimes causes complete failures in late plantings. Our corms are treated with Spergon, and so far we have heard of very little disease in the bulbs supplied our customers, but as an additional precaution it is recommended that the corms be dipped in New Improved Ceresan (1 lb. to 50 gals. of water) for a period of 15 minutes before planting and then planted while still wet.

MINIATURE GLADIOLUS

The popularity of this type is increasing rapidly and so far supply has not been able to keep up with demand. We therefore strongly advise ordering early.
